

Resume for Charles Mongillo (2014)

INFORMATION & GOALS

Computers have been a passion of mine for the last 35 years. My first computer was little more than a charged up calculator, but the idea of being able to use code to make real world changes captivated me.

I am applying for a web developer position, but I am capable of much more. When I put my name on a piece of software it has to work efficiently and without error, or I can not be happy with it.

Web Servers

Apache - Node ...can quickly adapt to others

Revision Control
Subversion - Git ...can quickly adapt to others

Platforms
Mac OSX - Linux - MS Windows

WORK EXPERIENCE

- If you need private contact information please let me know.

Big Bear Discounts 1994-2010

100% Telecommute

Big Bear was my first full business software endeavor. From the ground up I built each part of their software system to handle every part of their day to day activities. I used Microsoft Visual BASIC and Microsoft Access for the back-end program and PHP , MySQL and JavaScript for the front end web site.

Projects & Responsibilities
Web Site Design
Back-end Point of Sale (POS) Design
Web to Back-End communications (Synchronization)
Generate Functions for Reporting
Handle UPS and USPS shipping modules
Handle payment processing (Authorize.net, others)
Handle Stock
Handle End of Day (EOD) Functions (print invoices, generate vendor reports...)
Project Tech support and Training for new employees

RJ's Tobacco Emporium 1994-2010

100% Telecommute

After my Big Bear Discounts web site and management software was a success other companies approached me asking for similar software. As each company had it's own way of doing things, each software version was redesigned specifically for each company.

Projects & Responsibilities
Web Site Design
Back-end Point of Sale (POS) Design
Web to Back-End communications (Synchronization)
Generate Functions for Reporting
Handle UPS and USPS shipping modules
Handle payment processing (Authorize.net, others)
Handle Stock
Handle End of Day (EOD) Functions (print invoices, generate vendor reports...)
Project Tech support and Training for new employees

00TaxFree 1994-2010

100% Telecommute

00TaxFree was a subsidiary of the hugely successful RJ's. When they created this company they asked me to write the software for it.

Projects & Responsibilities

Back-end Point of Sale (POS) Design

Web to Back-End communications (Synchronization)

Generate Functions for Reporting

Handle UPS and USPS shipping modules

Handle payment processing (Authorize.net, others)

Handle Stock

Handle End of Day (EOD) Functions (print invoices, generate vendor reports...)

Project Tech support and Training for new employees

DeerPath Cigarettes 1996-2011

100% Telecommute

Deerpath was the last substantial tobacco company I wrote software for. Each cigarette company I worked with started out by not knowing what they wanted their software to do. Because the companies had very little knowledge about computers I had a lot of input on deciding how to coordinate their systems to make their day to day activities more efficient. For each of these companies I handled 100% of every aspect of the software life cycle, from flowchart to execution.
